

Table of Contents

I	The Interview	5
1	Getting Ready	6
2	Strategies For A Great Interview	11
3	Conducting An Interview	18
4	Problem Solving Patterns	22
II	Problems	47
5	Primitive Types	48
5.1	Computing parity	48
5.2	Swap bits	48
5.3	Bit reversal	49
5.4	Closest integers with the same weight	49
5.5	The power set	49
5.6	String and integer conversions	50
5.7	Base conversion	50
5.8	Spreadsheet column encoding	50
5.9	Elias gamma coding	51
5.10	Greatest common divisor	51
5.11	Enumerating primes	51
5.12	Checking if rectangles intersect	51
5.13	Computing $x \times y$ without multiply or add	52
5.14	Computing x/y	52
6	Arrays and Strings	53
6.1	Dutch national flag	53
6.2	Lazy initialization	54
6.3	Max difference	54

6.4	Generalizations of max difference	55
6.5	Subset summing to 0 mod n	55
6.6	Longest contiguous increasing subarray	56
6.7	Computing equivalence classes	56
6.8	Offline minimum	56
6.9	BigInteger multiplication	56
6.10	Permuting the elements of an array	57
6.11	Invert a permutation	57
6.12	Next permutation	57
6.13	Rotate an array	57
6.14	Sudoku checker	58
6.15	Print 2D array in spiral order	58
6.16	Painting	59
6.17	2D array rotation	59
6.18	Run-length encoding	60
6.19	Reverse all the words in a sentence	60
6.20	Find the first occurrence of a substring	60
6.21	Replace and remove	61
6.22	Phone number mnemonic	61
6.23	Regular expression matching	61
7	Linked Lists	63
7.1	Merge two sorted lists	64
7.2	Checking for cyclicity	64
7.3	Median of a sorted circular linked list	64
7.4	Overlapping lists—no lists have cycle	65
7.5	Overlapping lists—lists may have cycles	65
7.6	Even-odd merge	65
7.7	Deletion from a singly linked list	66
7.8	Remove the k -th last element from a list	66
7.9	Reversing a singly linked list	66
7.10	Palindromicity in linked list	67
7.11	Zippping a list	67
7.12	Copying a postings list	67
8	Stacks and Queues	68
8.1	Stack with max operation	68
8.2	Expression evaluation	69
8.3	Printing the keys in a BST	69
8.4	Searching a postings list	69
8.5	Towers of Hanoi	70
8.6	Views of the sunset	70
8.7	Stack sorting	70
8.8	Normalized path names	70

8.9	Printing a binary tree in level order	72
8.10	Implement a circular queue	72
8.11	Implement a queue using two unsigned integers	72
8.12	Queue from two stacks	73
8.13	Queue with max	73
8.14	Maximum of a sliding window	73
9	Binary Trees	74
9.1	Balanced binary trees	76
9.2	k -balanced nodes	76
9.3	Symmetric binary tree	77
9.4	Locking in a binary tree	77
9.5	Inorder traversal with $O(1)$ space	77
9.6	Successor in a binary tree	78
9.7	Determining the k -th node in an inorder traversal	78
9.8	Reconstructing a binary tree from traversal data	78
9.9	Reconstructing a binary tree from a preorder traversal with marker	79
9.10	Form a linked list from the leaves of a binary tree	79
9.11	The exterior of a binary tree	79
9.12	Lowest common ancestor in a binary tree	79
9.13	Lowest common ancestor in a binary tree, with parent pointer	80
9.14	Lowest common ancestor in a binary tree, close ancestor	80
9.15	Shortest unique prefix	80
10	Heaps	81
10.1	Merging sorted files	81
10.2	Sort k -increasing-decreasing array	82
10.3	Stacks and queues from heap	82
10.4	Closest stars	82
10.5	The k -th largest element—streaming case	83
10.6	Approximate sort	83
10.7	Closest to median	83
10.8	Online median	83
10.9	Generating numbers of the form $a + b\sqrt{2}$	83
10.10	Compare with the k -th largest element	84
11	Searching	85
11.1	Search a sorted array for first occurrence of k	87
11.2	Search a sorted array for the first element larger than k	87
11.3	Search a sorted array for $A[i] = i$	87
11.4	Search for a pair in an abs-sorted array	88
11.5	Search a cyclically sorted array	88
11.6	Search a sorted array of unknown length	88
11.7	Completion search	89
11.8	Searching in two sorted arrays	89

11.9	Computing square roots	89
11.10	2D array search	89
11.11	Finding the winner and runner-up	90
11.12	Finding the min and max simultaneously	90
11.13	The k -th largest element	90
11.14	The k -th largest element—large n and small k	90
11.15	Finding a missing element	91
11.16	Find the duplicate and missing elements	91
11.17	Find the element that appears only once	91
11.18	Searching an array with close entries	92
11.19	Majority find	92
12	Hash Tables	93
12.1	Design a hash function for dictionaries	93
12.2	A hash function for the state of a chess game	94
12.3	Nearest repetition	94
12.4	Binary tree compression	95
12.5	Pair users by attributes	95
12.6	Pair users by attributes, approximate matching	96
12.7	Anagrams	96
12.8	Can a string be permuted to form a palindrome?	96
12.9	Anonymous letter	96
12.10	Line through the most points	96
12.11	Search for frequent items	97
12.12	Automatic hyphenation	97
12.13	Plagiarism detector	97
12.14	Smallest subarray covering set	97
12.15	Smallest subarray sequentially covering set	98
12.16	ISBN cache	98
13	Sorting	99
13.1	Good sorting algorithms	99
13.2	Variable length sort	100
13.3	Least distance sorting	100
13.4	Counting sort	100
13.5	Intersect two sorted arrays	100
13.6	Team photo day—1	101
13.7	Count the occurrences of characters in a sentence	101
13.8	Unique elements	101
13.9	Task assignment	102
13.10	Rendering a calendar	102
13.11	Union of intervals	103
13.12	Points covering intervals	103
13.13	Rays covering arcs	103

13.14	The 3-sum problem	104
13.15	Pancake sorting	104
14	Binary Search Trees	105
14.1	Does a binary tree satisfy the BST property?	105
14.2	Updating a BST	106
14.3	Search a BST for first occurrence of k	106
14.4	Search BST for the first key larger than k	107
14.5	Min-first BST	107
14.6	Building a BST from a sorted array	107
14.7	Convert a BST to sorted doubly linked list	107
14.8	Build a BST from a sorted doubly linked list	108
14.9	Merge two BSTs	108
14.10	Find the k largest elements in a BST	109
14.11	Traversal orders in a BST	109
14.12	Lowest common ancestor in a BST	110
14.13	Descendant and ancestor	110
14.14	Nearest restaurant	110
14.15	Minimize the distance in three sorted arrays	111
14.16	Most visited pages	111
14.17	Most visited pages in a window	111
14.18	Gaussian primes	111
14.19	View from above	112
14.20	Adding credits	113
14.21	Counting the number of entries in an interval	113
14.22	Querying server logs	113
15	Meta-algorithms	115
15.1	Drawing the skyline	116
15.2	Counting inversions	116
15.3	Nearest points in the plane	117
15.4	Tree diameter	117
15.5	Maximum subarray sum in a circular array	119
15.6	Longest nondecreasing subsequence	120
15.7	Longest subarray whose sum $\leq k$	120
15.8	Largest rectangle under the skyline	120
15.9	Maximum 2D subarray	121
15.10	Searching for a sequence in a 2D array	121
15.11	Levenshtein distances	121
15.12	Word breaking	122
15.13	Pretty printing	122
15.14	Computing the binomial coefficients	122
15.15	Score combinations	123
15.16	Number of ways	123

15.17	Planning a fishing trip	124
15.18	Picking up coins, maximum gain	124
15.19	Voltage selection in a logic circuit	124
15.20	Image compression	125
15.21	Minimize waiting time	126
15.22	Scheduling tutors	126
15.23	Job assignment	127
15.24	Load balancing	127
15.25	Packing for USPS priority mail	127
15.26	Huffman coding	128
15.27	Node reweighing	128
15.28	Planning a party	129
15.29	Assigning radio frequencies	129
16	Graphs	131
16.1	Searching a maze	133
16.2	Transform one string to another	134
16.3	Wiring a printed circuit board	134
16.4	Degrees of connectedness	135
16.5	Extended contacts	135
16.6	Theory of equality	136
16.7	Team photo day—2	137
16.8	Minimum delay schedule, unlimited resources	137
16.9	Shortest path with fewest edges	137
16.10	Quickest route	138
16.11	Road network	138
16.12	Arbitrage	138
16.13	Updating a minimum spanning tree	138
17	Intractability	139
17.1	Ties in a presidential election	140
17.2	The knapsack problem	140
17.3	Dividing the spoils	141
17.4	Measuring with defective jugs	141
17.5	Delay-constrained shortest-path	142
17.6	Traveling salesman in the plane	142
17.7	The warehouse location problem	142
17.8	Sudoku solver	143
17.9	Expression synthesis	143
17.10	Computing x^n	143
17.11	CNF-SAT	144
17.12	Checking the Collatz conjecture	144
17.13	Minimum delay scheduling, limited resources	144
18	Parallel Computing	145

18.1	Service with caching	146
18.2	Thread pools	146
18.3	Asynchronous callbacks	146
18.4	Timer	147
18.5	Readers-writers	147
18.6	Readers-writers with write preference	147
18.7	Readers-writers with fairness	148
18.8	Producer-consumer queue	148
18.9	Barber shop	148
18.10	Dining philosophers	148
18.11	Checking the Collatz conjecture in parallel	149
18.12	Broadcast in a rooted tree	149
18.13	Leader election	149
18.14	TeraSort and PetaSort	149
18.15	Distributed throttling	150
19	Design Problems	151
19.1	Creating photomosaics	151
19.2	Search engine	151
19.3	IP forwarding	152
19.4	Spell checker	152
19.5	Stemming	152
19.6	T _E X	153
19.7	UNIX tail	153
19.8	Copyright infringement	153
19.9	Implement PageRank	153
19.10	Scalable priority system	153
19.11	Latency reduction	154
19.12	Online advertising system	154
19.13	Recommendation system	154
19.14	Driving directions	155
19.15	Distributing large files	155
19.16	Online poker	155
19.17	Design the World Wide Web	155
20	Probability	156
20.1	Random permutations—1	157
20.2	Offline sampling	157
20.3	Random permutations—2	157
20.4	Uniform random number generation	157
20.5	Nonuniform random number generation	158
20.6	Reservoir sampling	158
20.7	Online sampling	158
20.8	House of Representatives majority	158

20.9	Differentiating biased coins	159
20.10	Balls and bins	159
20.11	Random permutations	159
20.12	Expected number of die rolls	159
20.13	Forming a triangle—1	160
20.14	Forming a triangle—2	160
20.15	Selecting the best secretary	160
20.16	The once-or-twice game	160
20.17	The multibet card color game	160
20.18	The one red card game	161
20.19	Optimum bidding	161
20.20	The Kelly criterion	161
20.21	The complexity of AND-OR expressions	161
20.22	Option pricing—discrete case	162
20.23	Option pricing with interest	162
20.24	Option pricing—continuous case	163
21	Discrete Mathematics	164
21.1	500 doors	164
21.2	Efficient trials	164
21.3	Space-time intersections	165
21.4	Hershey bar	165
21.5	Picking up coins, don't lose	165
21.6	$n \times n$ chomp	165
21.7	$n \times 2$ chomp	166
21.8	$n \times m$ chomp	166
21.9	Mailbox placement	166
21.10	The gasup problem	166
21.11	Closest palindrome	167
21.12	The maximum product of $(n - 1)$ numbers	167
21.13	Height determination	167
21.14	Symmetric-Whack-a-Mole	167
21.15	Celebrity identification	168
21.16	Ramsey theory	168
21.17	Tournaments and Hamiltonian paths	168
21.18	Stable assignment	168
21.19	Dancing with the stars	169
21.20	Tiling a chessboard	169
21.21	Team photo day—3	169
21.22	Largest common rooted subtree	169
21.23	Team elimination	170
21.24	Rounding a matrix	170
21.25	Common knowledge	171
21.26	Computing an optimum mixed-strategy	171

III Hints	172
IV Solutions	182
V Notation and Index	485
